About the course

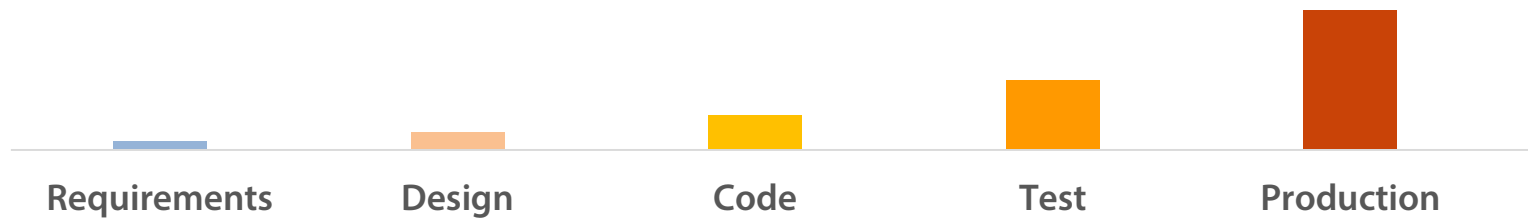

- This course is for web developers
- You're going to be seeing a familiar environment with familiar tools
- It doesn't matter what your favourite web stack is, this course is for everyone

Why hack yourself first?

- **Developers need to hone cyber-offence skills**
 - If you can't think like a hacker, it's difficult to defend against them
- **Hacking yourself first a method of easily assessing website security without access to code**
 - Everything we're going to look at is what can be remotely observed about a website's security position
- **This approach allows us to explore the concept of defence in depth**
 - As we progress, we'll fix multiple security flaws that would otherwise have been single points of failure

Understanding the relative cost of bug fixes

Summary
